

3 EASY PIECES

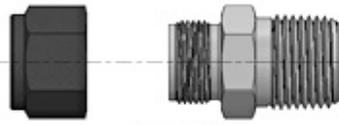

Simple design with maximum performance and ease of installation

CORRECT INSTALLATION

SINGLE FERRULE, INSTALLED BACKWARDS

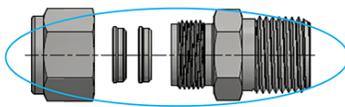

NO FERRULE

Do you take safety SERIOUSLY?

CPI™ tube fittings are designed to provide three easy components for the installer - nut, ferrule and body. This virtually eliminates the chance of improper assembly which is common in double-ferrule fittings.

Don't take chances! With fewer components, there is less that can go wrong; single ferrule solutions are quicker and easier to assemble, so the opportunity for error is greatly reduced. Parker CPI™ fittings are sold completely assembled and ready for immediate use.
