The Challenge:

RG Group was completing hydraulic systems for a munitions disposal system. The systems were somewhat unique because they needed to operate at 10,000 psi and required a fluid connector and valve solution to handle the high- pressure system.

The customer wanted to reduce the field equipment and time required to complete the high-pressure system connections...

The Solution:

MPVs were specified and dramatically reduced the time required to complete the connections.

MPVs or Medium Pressure Valves work in applications up to 20,000 PSI and up to 800°F, a good match for many critical applications. In addition to the connections made directly on the Hydraulic Power Unit (HPU), there were numerous connections to be made in the field upon delivery and installation.
