

## FLUID COMPONENT SERVICES AT A GLANCE

**Fluid Component Services** specializes in providing technical services to the **energy**, **marine**, and **industrial markets**. FCS has been supplying custom preventative maintenance, installation, flushing and troubleshooting services on a national level for over 40 years.

### One Company... One Complete **SOLUTION**

**Hydraulics** Industrial | Mobile | Marine

**Automation** Pneumatics | Electronics | Robotics

**Electromechanical Systems**

**Fluid Connectors** Instrumentation | Industrial

**Engineered Systems and Solutions**

**Factory Authorized Repair Service**

**Installation and Field Service**

**Vendor Managed Inventory Services**

**WE KEEP  
YOUR  
BUSINESS  
IN MOTION**

# Fluid Component Services

## Hydraulic System Design

### INDUSTRIAL | MOBILE | MARINE

**Fluid Component Services** is dedicated to designing custom-built hydraulic systems that operate reliably in the most extreme environments. Our Engineering Department will work with you to design a system that meets all your operational and financial goals.

## Custom Field Installations

Custom field installations are more like a work of art than a hydraulic system. Each one is uniquely different and needs to be treated as such. FCS will provide you with a custom-

designed hydraulic system with field installation and start-up assistance that will meet your most demanding specifications.

### Field Plumbing Services

FCS field plumbing services include custom fabrication and installation of all

hydraulic tubing and hosing, system flushing (removal of harmful contaminants using our custom-designed **nitrogen purge** flushing system) and primer/enamel paint based on customer requirements.

## Marine Service

Our **Marine Division** specialists have all the skills and expertise needed to go on location anywhere in the country, providing fast and reliable repair, system modification or creation/installation of new hydraulic systems. We offer general hydraulic system repair, hydraulic steering cylinder rebuild or replacements for commercial, recreational, industrial or government contract work.

## Maintenance & Flushing Services

**Leave it to the experts.**

### Oil Cleaning

Hydraulic systems need regularly scheduled maintenance. Keeping your preventative maintenance up-to-date drastically reduces downtime and equipment wear and tear. Without it, harmful contaminants build up over the lifetime of your system, costing you time and money. Our certified hydraulic technicians efficiently filter your existing hydraulic fluid, change pressure and return filters and suction strainers with minimal downtime.

### Flushing Services

When hydraulic system components begin to fail, harmful contaminants spread throughout your system. Varnish and carbon buildup compromise system reliability and longevity. **Complete system flushing** removes harmful substances and extends the life of your system.

## Repair Service

Breakdowns can happen any time and we understand how important it is for you to have repairs made as quickly and efficiently as possible. FCS offers timely and cost-competitive repair and rebuild services.

We'll use our knowledge and expertise to get your machine back up and running at full capacity in no time.
