

## Filling the void for a manufacturer of high-priority military apparatus

A combination of RG Group resources and products, resulted in an outcome that met specifications and saved lives

### How it began...

A top manufacturer of military equipment and devices needed assistance developing hydraulic components that would support their proposed mine clearing solution.

### How it evolved...

The foundation for many of the RG Group projects start at the design stage. This organization worked with RG Group to create a hydraulic based solution to fit within the structure of equipment they currently had in development.

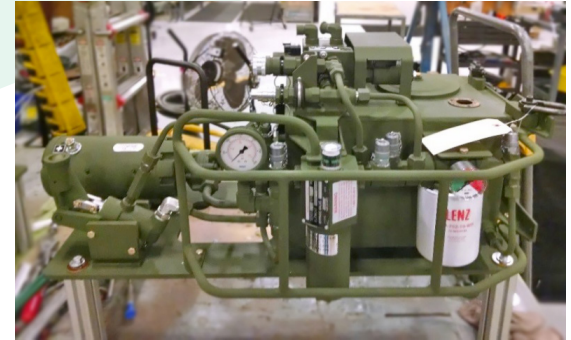

### How it was resolved...

RG Group was tasked with building and testing a hydraulic power unit that would be used for hydraulic actuation of a mine field clearing launcher.

### Trusted Expertise, delivered...

Within weeks, RG Group designed, fabricated and tested a complete system to fulfill their requirements. RG Group's ability to provide seamless, homogeneous support resulted in a complete drawing package, just-in-time delivery and creation of what would be the first of many units.
